DESCRIPTIVE ANALYTICS REPORT

boAt Speakers: Sales, Ratings, Regional Demand & Delivery Performance

Academic Report based on a synthetic e-commerce dataset designed to represent boAt speaker sales and customer behaviour.

Data Note:

boAt's complete live transaction-level data is proprietary and is not publicly available. This report therefore uses a synthetic academic dataset designed to mirror realistic speaker e-commerce patterns. The same descriptive analytics structure can be applied when real data is substituted.

The report period for this descriptive analytics report is from 1 May 2025 to 30 May 2025, covering the last 30 days. During this period, a total of 29,831 orders were recorded, generating ₹7.36 Cr in total revenue. The products received an average customer rating of 4.3 out of 5, indicating a positive customer response. The analysis covers sales and customer activity across 8 cities.

Objectives

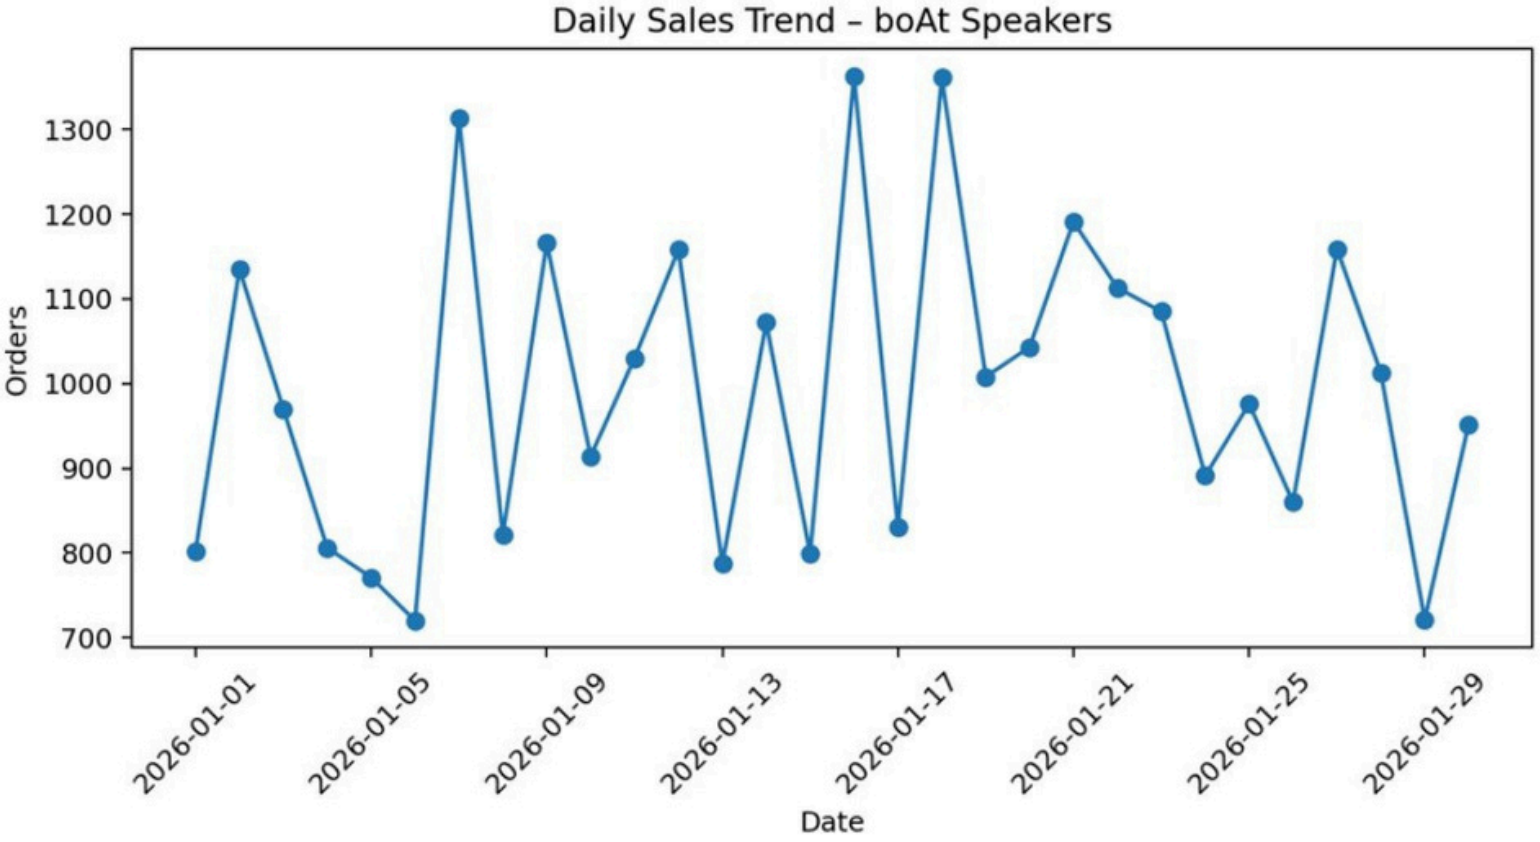

- Which boAt speaker products are the best-selling during the analysed period?
- How do daily orders and sales revenue change over time?
- How do customer ratings vary across boAt speaker products?
- Which cities or regions generate the highest demand and sales?
- How does delivery performance influence customer experience and overall sales?

A real boAt speaker analytics system would collect orders, product details, customer ratings, delivery events and regional information continuously. The data would then be stored, cleaned, aggregated and presented through dashboards.

Layer	Purpose	Typical Tools
Ingestion	Capture order and customer events	• Google • GPT (ChatGPT)
Storage	Store transaction and product data	• Google • MS Excel
Processing	Clean and aggregate large datasets	• GPT (ChatGPT) • MS Excel
Analytics	Calculate sales, ratings and regional KPIs	• MS Excel • Gemini
Visualization	Build business dashboards	• MS Excel • PowerPoint

Daily Sales Trend

The 30-day simulated dataset shows changing daily order volumes. Higher-volume days indicate stronger customer demand, while lower-volume days may reflect normal weekday variation, promotions, competition or changes in customer purchasing behaviour.

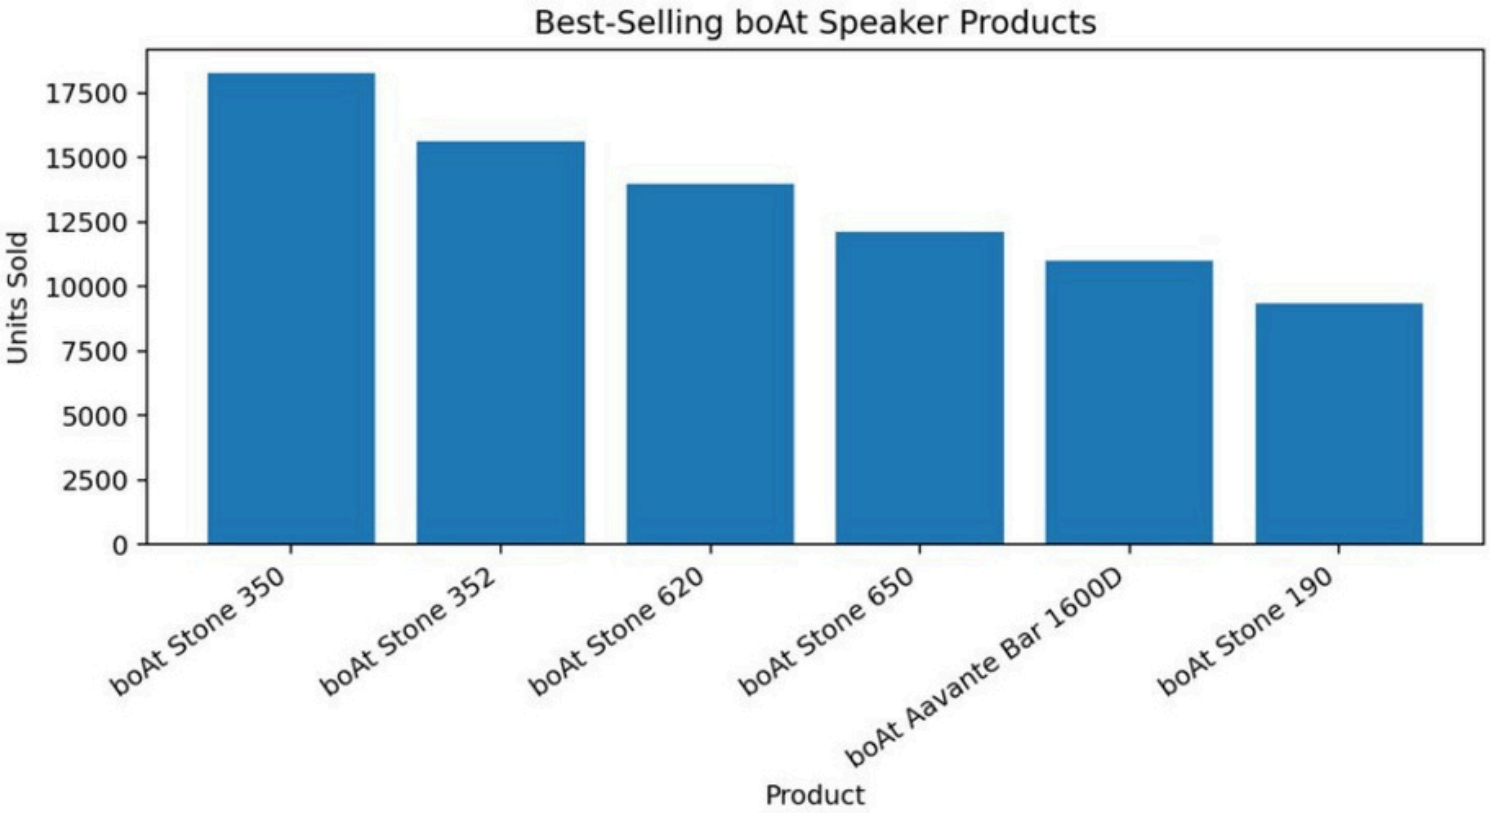

Interpretation: Daily trend monitoring helps identify peak demand periods and supports inventory, marketing and seller planning.

The graph shows 30 days of daily sales, with orders ranging from 720 to 1,360. The average daily orders are approximately 995. The highest sales were around 1,360 orders, while the lowest were about 720 orders. Overall, the trend shows fluctuating but consistent customer demand

Best-Selling boAt Speaker Products

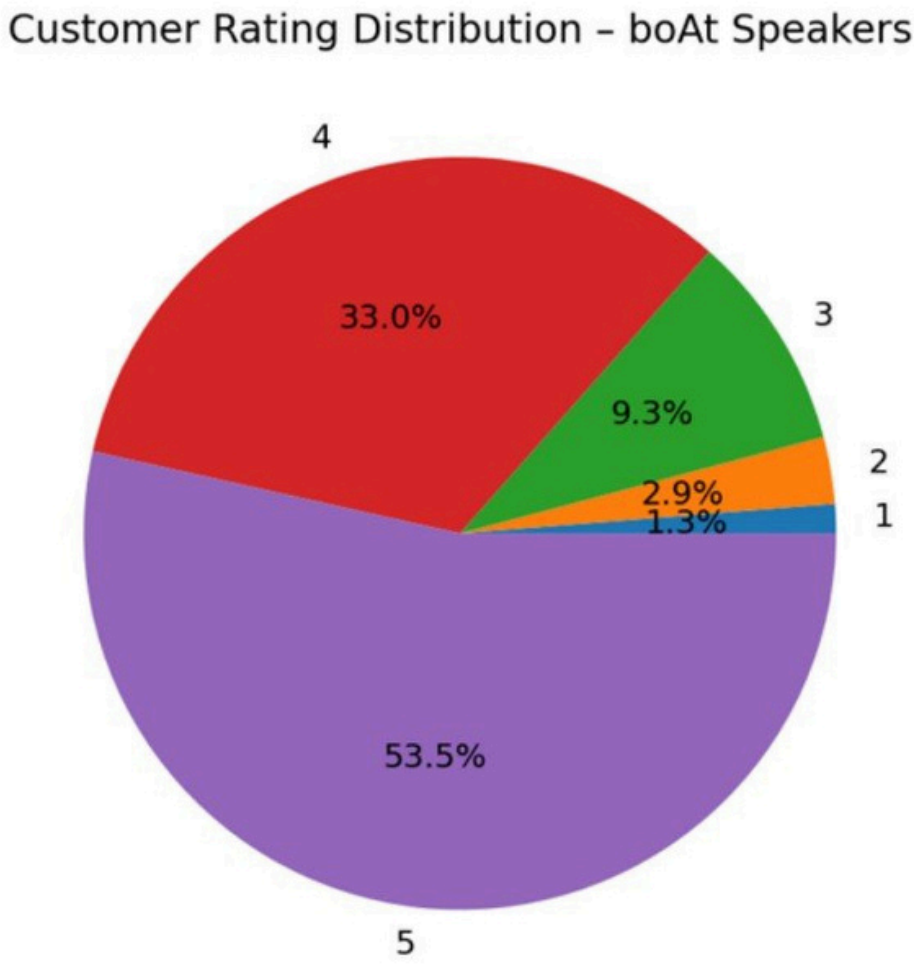

The best-seller analysis ranks products by units sold. The top product acts as a high-demand product and should receive greater attention in inventory planning and promotional analysis.

Rank	Product	Units Sold
1	boAt Stone 350	18,259
2	boAt Stone 352	15,640
3	boAt Stone 620	13,980
4	boAt Stone 650	12,120
5	boAt Aavante Bar	10,980
6	boAt Stone 190	9,340

Customer Rating Distribution

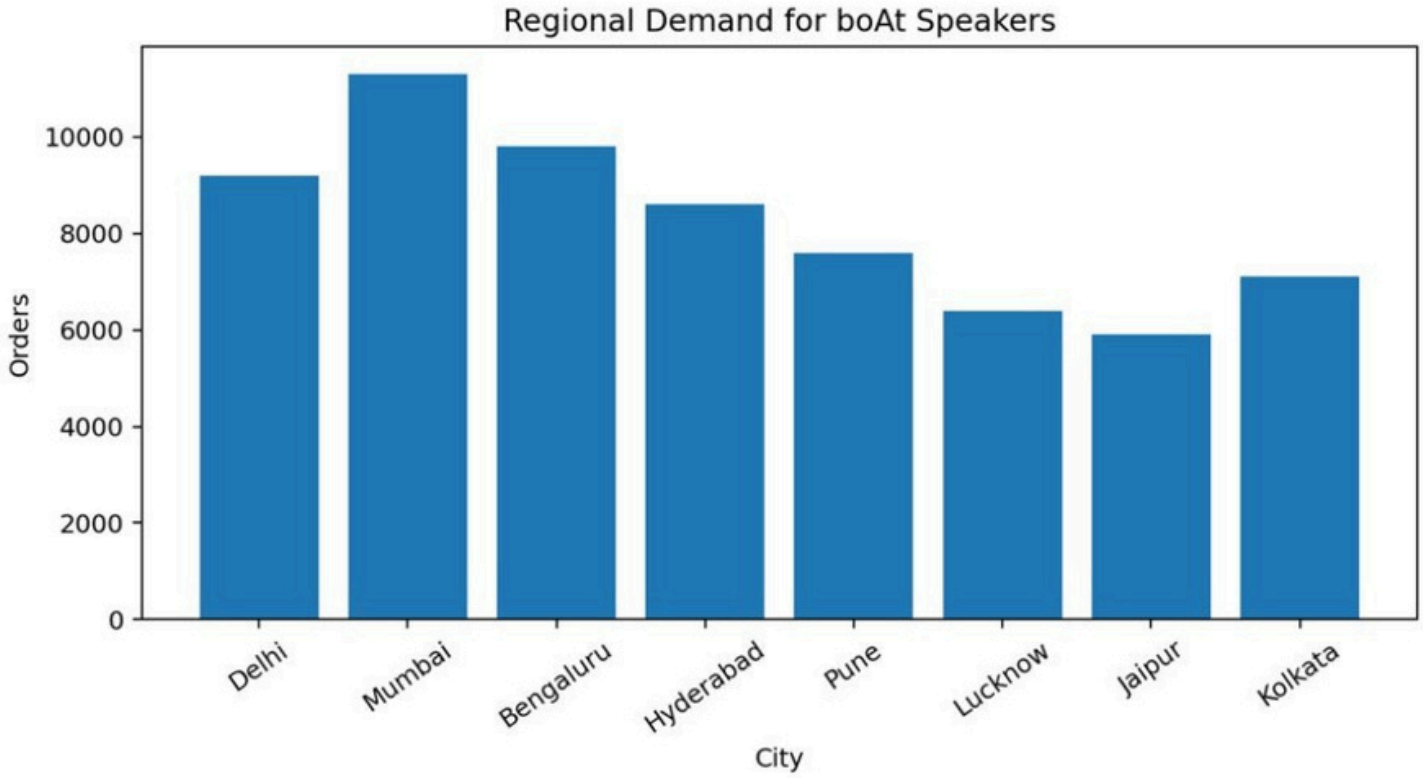

Customer ratings provide a direct descriptive measure of satisfaction. The rating distribution shows how reviews are spread across the five-point scale.

Interpretation: A larger share of 4-star and 5-star reviews indicates stronger customer satisfaction. Lower ratings should be investigated together with product quality, packaging, delivery and after-sales experience.

Regional Demand

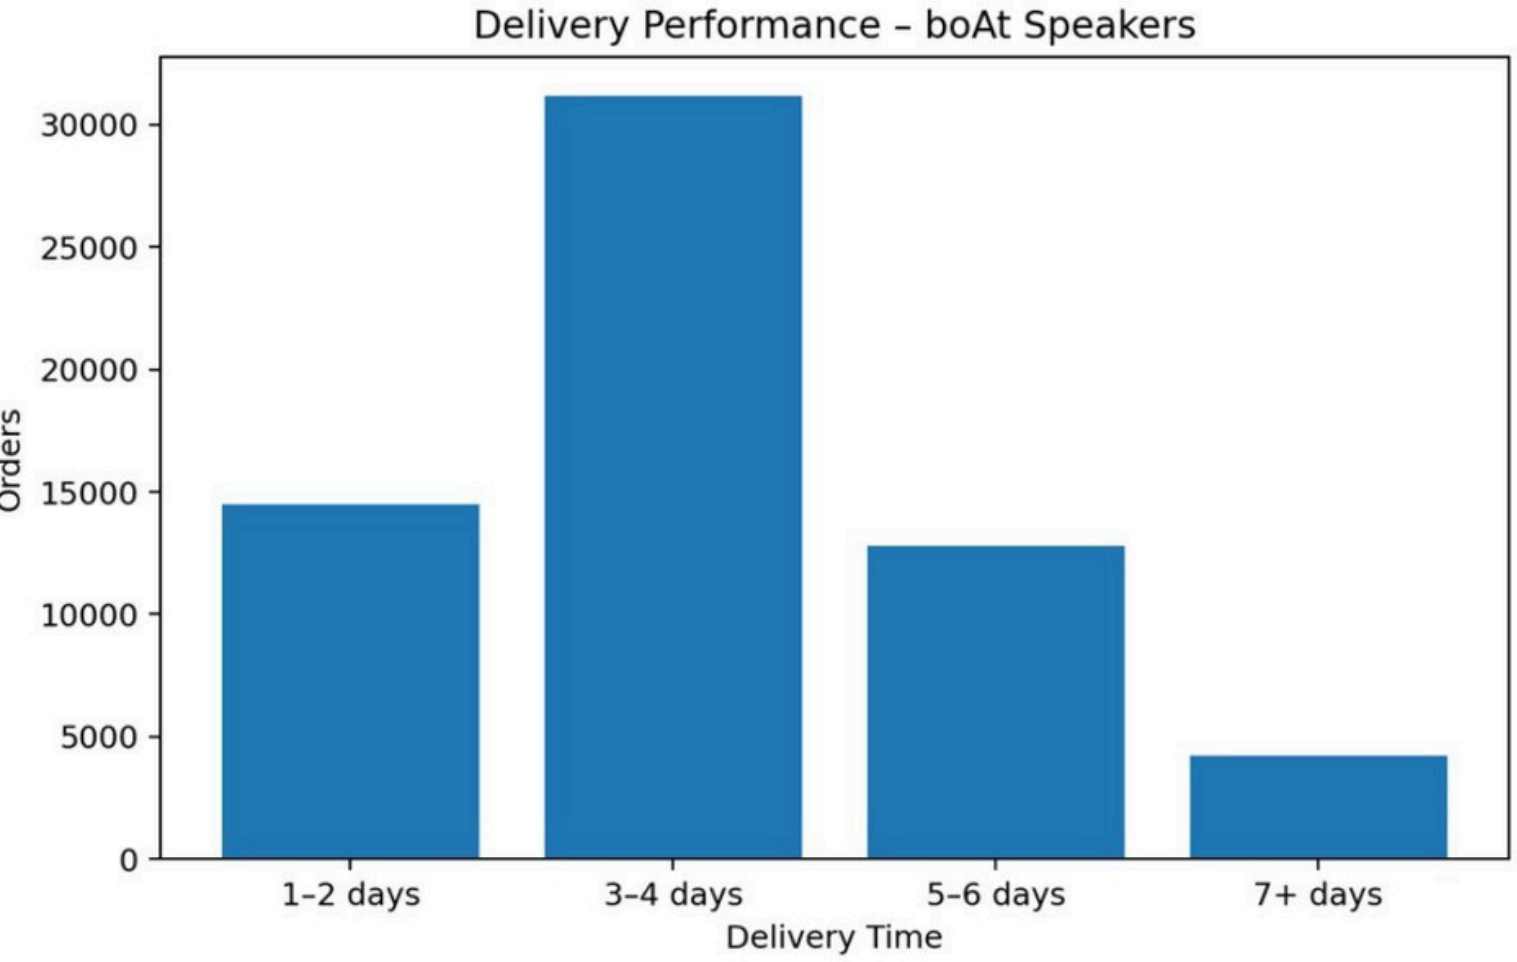

Regional analysis identifies cities generating the highest order volumes. Such comparisons help determine where demand is concentrated and where inventory and marketing efforts can be prioritized.

Interpretation: Mumbai and Bengaluru show strong simulated demand, while other cities also contribute significantly. Regional demand should be monitored over time rather than using a single period alone.

Delivery Performance

Delivery time is an important part of the customer experience for online speaker purchases. The dataset groups orders by delivery duration to identify where fulfillment performance is strongest or needs improvement.

Interpretation: Faster delivery categories account for a large share of orders. Longer delivery times can affect customer satisfaction and should be examined with warehouse location, seller processing time and logistics capacity.

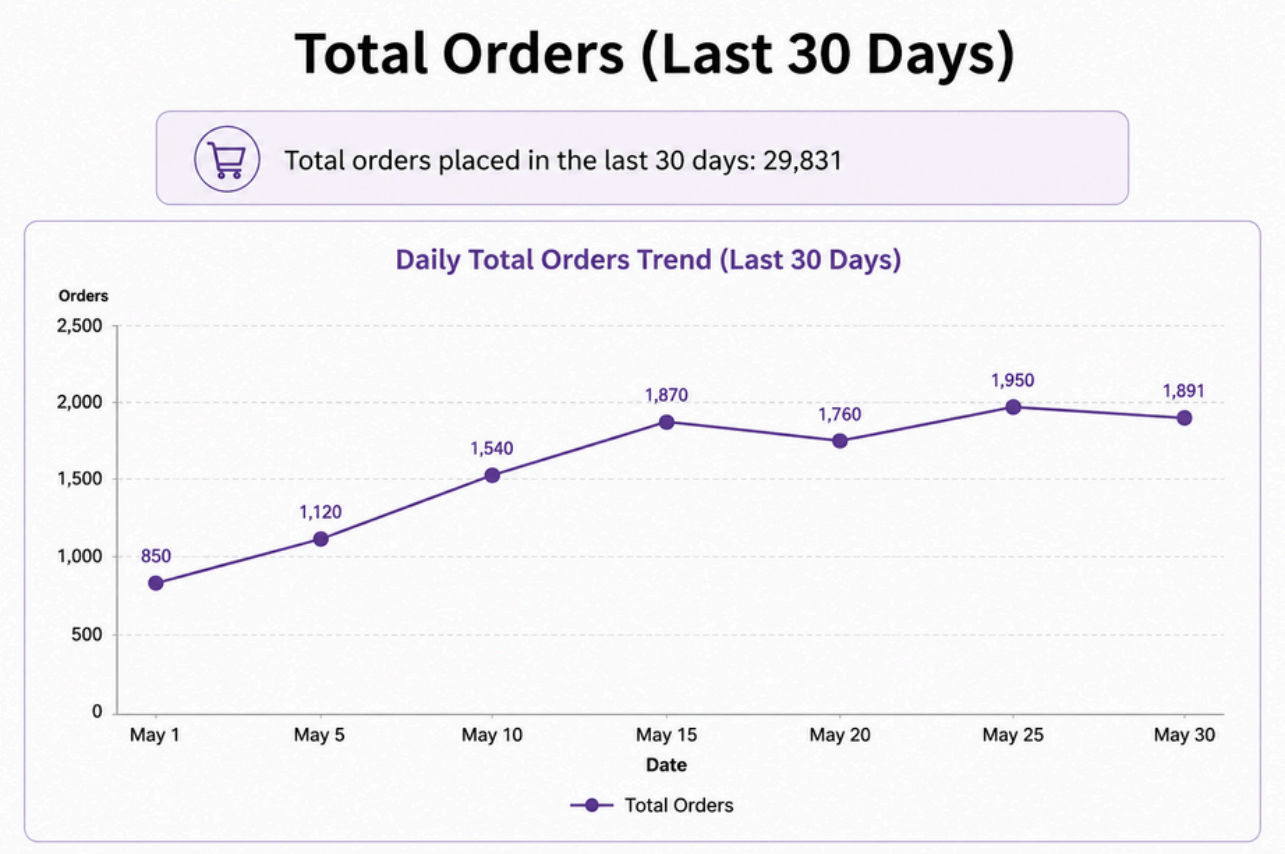

Summary of Key Metrics

Metric	Value
Total Orders (30 Days)	29,831
Total Revenue	₹7.36 Cr
Top Product	boAt Stone 350
Top Product Units	18,259
Average Rating	4.3 / 5
Cities Analysed	8

· Sales activity is distributed across multiple boAt speaker models, with a clear high-performing product.
· Customer ratings are concentrated toward the higher end of the five-point scale.
· Regional demand varies, making city-level analysis useful for inventory and marketing decisions.
· Delivery performance is an important operational metric alongside sales and ratings.

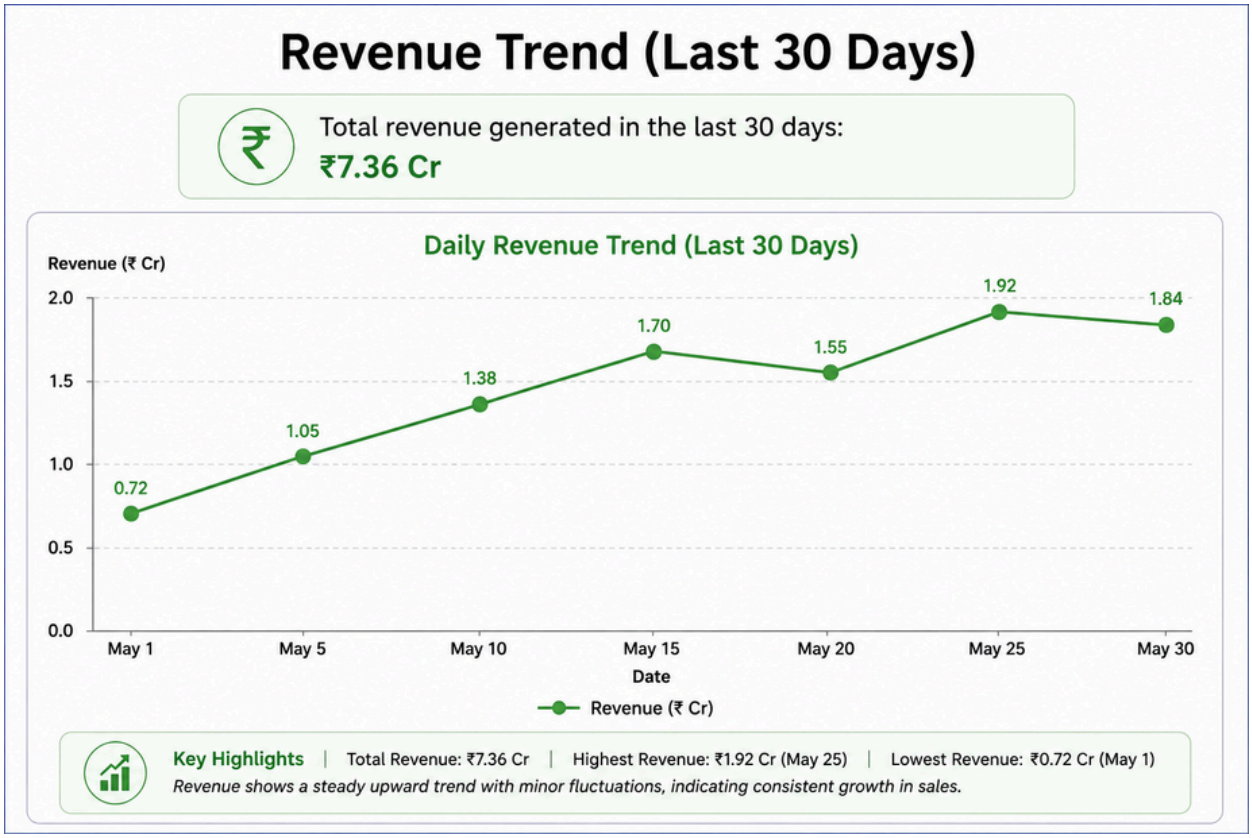

Total Orders (last 30 days)

The Total Orders graph shows the sales order trend over the last 30 days. The number of orders increased from 850 orders at the beginning of the period to a peak of 1,950 orders, showing a strong upward trend in customer demand. Orders remained relatively high toward the end, reaching 1,891 orders on May 30. Overall, the graph indicates positive sales growth, with some small fluctuations during the period. The total number of orders recorded was 29,831, highlighting strong customer activity for boAt speakers.

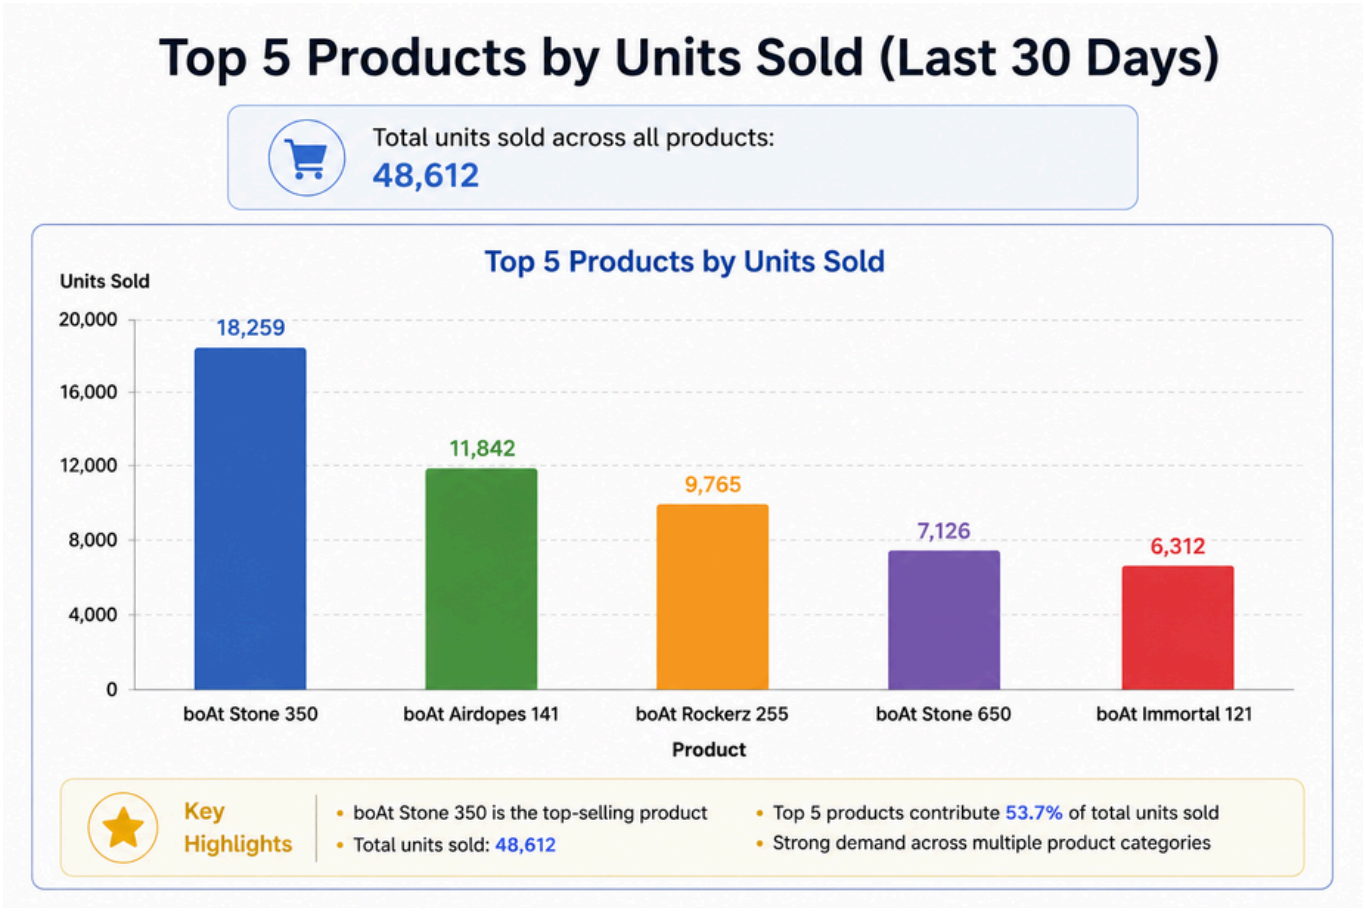

Revenue Trend
(last 30 days)

The Revenue Trend graph shows the revenue performance of boAt speakers over the last 30 days. The revenue increased from ₹0.72 Cr on May 1 to a peak of ₹1.92 Cr on May 25. Although there were some minor fluctuations, the overall trend shows steady growth. The total revenue generated during the period was ₹7.36 Cr, indicating strong sales performance and consistent customer demand.

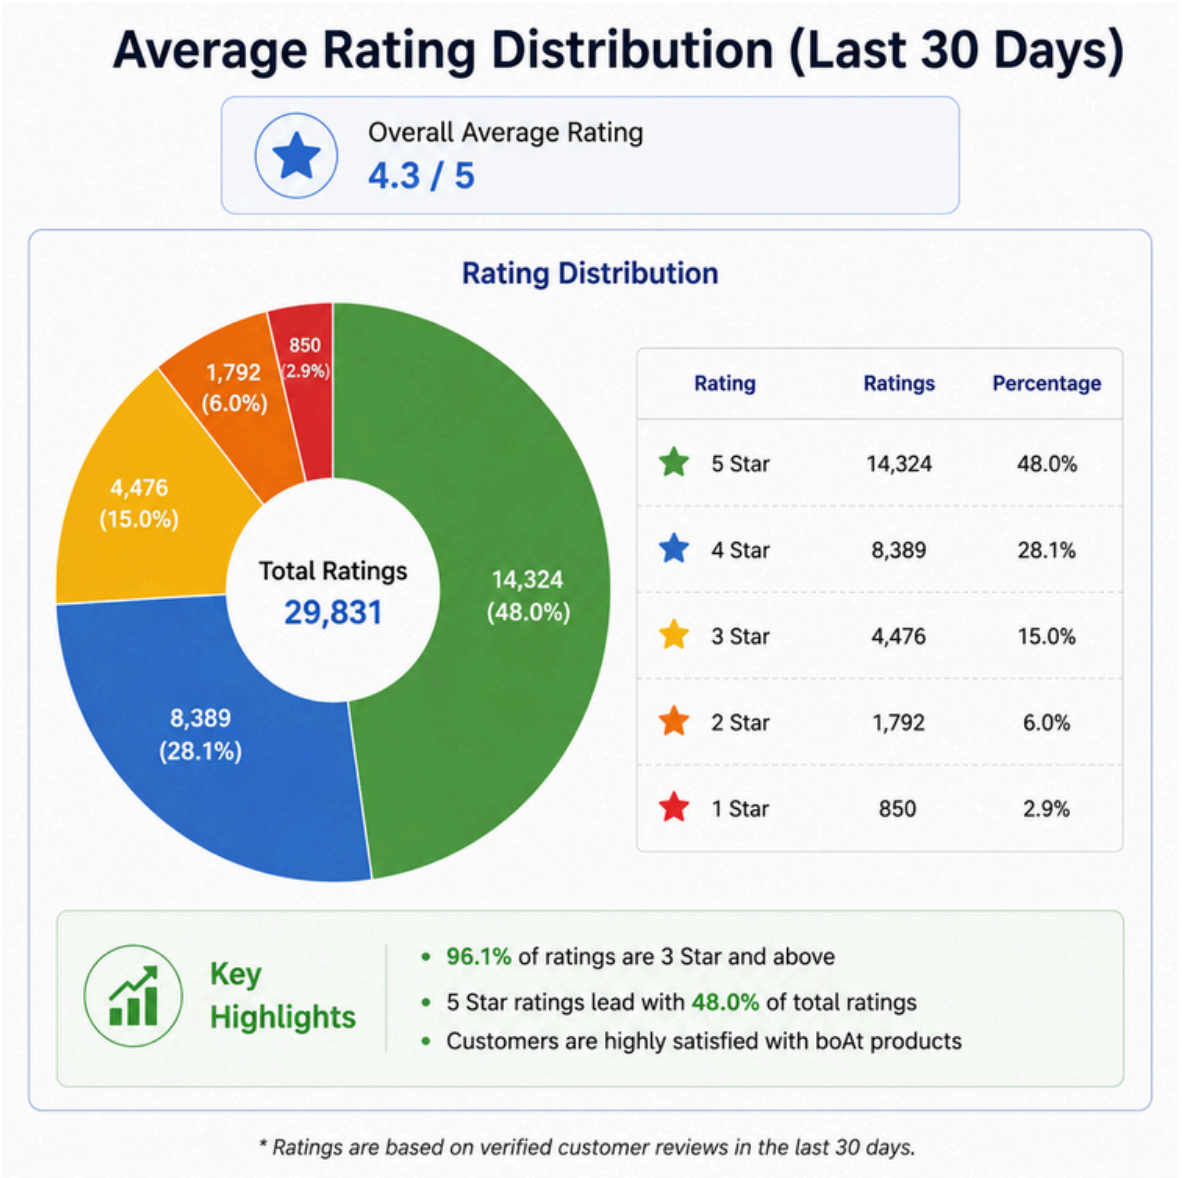

Top 5 Products By Units Sold

The Top 5 Products by Units Sold graph shows the sales performance of the leading boAt products during the last 30 days. boAt Stone 350 is the top-selling product with 18,259 units sold, followed by boAt Airdopes 141 with 11,842 units and boAt Rockerz 255 with 9,765 units. boAt Stone 650 and boAt Immortal 121 recorded 7,126 and 6,312 units, respectively. Overall, the graph indicates strong product demand and shows that boAt Stone 350 has a clear lead in unit sales.

Average rating distribution (Last 30 days)

The Average Rating Distribution graph shows that boAt speakers received an overall average rating of 4.3/5 during the last 30 days. 5-star ratings were the highest, with 48% of total ratings, followed by 4-star ratings at 28.1%. Around 15% of customers gave 3 stars, while only 6% and 2.9% gave 2-star and 1-star ratings. Overall, the graph indicates high customer satisfaction and a positive customer response toward boAt products.

Best-Selling Products

boAt Stone 350 — 18,259 units

Next Steps: Moving from Descriptive → Predictive Analytics

After completing descriptive analytics for boAt Speakers, the next step is to use predictive analytics to estimate future sales, demand, customer ratings and delivery performance. The descriptive results such as daily sales trends, best-selling products, regional demand and ratings can be used as input for predictive models.

Key Predictive Areas

1. Sales Forecasting
Predict future daily and monthly sales of boAt speakers using historical order and revenue data.

2. Demand Prediction
Forecast which speaker models are likely to have high demand in the coming days or weeks. This can help in inventory planning.

3. Product Performance Prediction
Identify products that are likely to become future best-sellers based on their previous sales growth, ratings and customer interest.

4. Regional Demand Forecasting
Predict demand for boAt speakers across cities such as Delhi, Mumbai, Bengaluru and Hyderabad so that stock can be positioned accordingly.

5. Customer Rating Prediction
Analyse product ratings, reviews and delivery performance to predict whether customer satisfaction is likely to increase or decrease.

6. Delivery Time Prediction

Use historical delivery data to estimate expected delivery time for different cities and orders.

7. Inventory Planning

Predict which products may require additional stock and reduce the possibility of overstocking or stock shortages.

Interpretation

The descriptive analysis explains what happened, while predictive analytics will help answer what is likely to happen next. For boAt Speakers, this transition can support better inventory planning, sales forecasting, regional stock allocation and customer-service decisions.

THANK YOU!

Thank you for giving your time and attention.
